What's New in the Default Accounts Picture Changer For Windows 8?

Windows 8 is a great operating system with a large number of changes compared to the previous version of the Windows OS. This Windows 8 edition is significantly different from its predecessors, and it includes the side bar, new icons, new face, new search, new commands, and new user interface. However, although these changes are a big improvement from previous operating systems, they are still somewhat like "glitches". Most Windows users have experienced the "Windows 8 glitch", which consists in changing the lock screen of the system to the desktop background. Therefore, in order to get back the default lock screen, a quick fix is needed. This article will show you how to find and replace the image of the lock screen of Windows 8. Also Read : Windows Explorer How to disable automatic wifi hotspot How to get rid of Windows 8 lock screen glitch? This glitch happens when Windows 8 checks the computer for important updates, and during this check, it sees the change in the background, and becomes locked on the lock screen. In order to get rid of it, you will need the image of the lock screen that you want to use as a replacement. If you are using the all-in-one PC from Microsoft then you can do this in the settings of your PC. Or if you are using a dedicated PC with Windows 8 you can access it by opening the Start Screen, then type the word "Settings", and then the "System and Security" section. There will be a list of options from where you can get the Lock Screen option. The image you want to use as a replacement should be located in the folder you chose as your default background. Now, if you have chosen the all-in-one PC from Microsoft, you can make a simple copy of the file found in the desktop background folder, and paste the image on the screen as the new background. For those users who have a dedicated PC, they can follow this instruction. Also Read : CD album files players Make a copy of the file in your Desktop folder Then, locate the folder in the file you created and open it. Now, navigate to the background folder of the PC and find the image of the background you want to use. Once you have found the folder, you can drag and drop the image file from the computer to the folder.
