File Splitz! Crack Full Product Key [Latest]

File Splitz! is a simple but effective file splitting application. There is no "drag and drop" functionality available. All tasks must be performed manually. File Splitz! offers two splitting methods (by size or into equal-sized parts). Both of them can be set to run separately or simultaneously, so you can choose the one that best suits your needs. There is also a speed setting available. You can choose a granularity in bytes. The program allows you to split files only into pieces which are exactly equal to the size of the granularity value. If you set it to 100 bytes, the process will split a file into pieces of exactly 100 bytes each. You can select the output directory from a list. When splitting a file, the application automatically calculates checksums and, if available, deletes the splitted pieces. But you can exclude pieces from checksum verification. This is useful if you don't have time to calculate the checksums or if the file's structure is corrupted. File Splitz! can also automatically delete the file if you have enabled the deletion feature. However, this feature should be enabled only if the destination directory is empty. You can also enable File Splitz! to automatically rename the splitted pieces in order to give them random names, like "Part.1", "Part.2", "Part.3" or anything else. This is useful if you need to use the data further. There is a simple and intuitive interface. The software pops up simple dialogs while performing its operations. File Splitz! is a user-friendly application. File Splitz! is completely free of cost. It is compatible with Windows XP, Vista, 7, 8, and 10. It requires .NET Framework 2.0 or later (download it from: [.NET Framework 2.0](#)).
