OfficeFIX

WORDFIX is a tool that can recover all your important data from a corrupted Word document, regardless of the extension (doc, docx, docm, wps, wpd). The program will search for the data inside the file and recreate it with complete formatting. If the file is completely damaged, it will not be possible to recover its content. Informatica is a global leader in data integration and business analytics software, making it possible to connect, integrate, and automate information across the enterprise. From sales to finance to operations, and marketing to customer service,

---

our solutions connect, analyze, and transform data into useful information that helps companies address their most important challenges. Our solutions are delivered as either an integrated or an add-on solution to SAP, and are designed to help any company quickly and easily connect to their information across the enterprise. OfficeFIX bundles a set of tools intended for repairing corrupted Office documents and retrieving their content. The suite includes dedicated applications for recovering Word documents, Excel spreadsheets, Outlook mail files and Access databases. The main interface of OfficeFIX provides one-click access to all the programs from within a single window. Each of the four applications rely on a user-friendly wizard, ready to assist you in carrying out a recovery task. Data inside damaged DOC, DOCX and DOCM documents can be

---

retrieved using WordFIX, which can save the output as Word, plain text or Unicode plain text files. It can process documents that are damaged due to virus infection and it is able to recover text content and formatting options. In case the file is severely corrupted, it might not succeed in performing a complete image and text retrieval. ExcelFIX works in a similar way, allowing data recovery from damaged spreadsheet files. The steps you must follow are practically the same. Once the operation is completed, the application displays a summary containing the number of sheets, text, formula and other cells, charts and images. Additionally, it features editing options, which allows you to modify the content of the document without having Excel installed on your computer. The database recovery tool comes by the name of AccessFIX and is capable of batch processing

---

multiple files at once, while OutlookFIX can be used for retrieving accidentally deleted Outlook e-mail files or providing access to data inside corrupted PST files stored on your computer. Providing options for fixing all major types of Office documents, OfficeFIX is an all-in-one suite that allows fast data recovery. Thanks 81e310abbf
