## Answer

(a) (i) False: A claim that an enterprise is pursuing through legal process, where the outcome is uncertain, is a contingent asset.
(ii) False: At the end of the accounting year, all the nominal accounts of the ledger book are totalled and transferred to Profit \& Loss A/c.
(iii) True: Where the due date is specifically given, then there is no need of further addition of 3 days grace to it.
(iv) False: Amount spent for replacement of any worn- out part of a machine is revenue expense since it is part of its maintenance cost.
(v) False: Debentures Suspense Account appears on asset side of Balance Sheet under Non-Current Asset.
(vi) False: If the errors are detected after preparing trial balance, then all the errors are not rectified through suspense account. There may be Errors of Principle and/or Errors of Omission, which can be rectified without opening a suspense account.
(b) Money Measurement concept: As per this concept, only those transactions, which can be measured in terms of money are recorded. Since money is the medium of exchange and the standard of economic value, this concept requires that those transactions alone that are capable of being measured in terms of money be only to be recorded in the books of accounts. Transactions and events that cannot be expressed in terms of money are not recorded in the business books.

Periodicity concept: According to this concept, accounts should be prepared after every period not at the end of the life of the entity. This is also called the concept of definite accounting period. Usually, this period is one accounting year. We generally follow from $1^{\text {st }}$ April of a year to 31 st March of the immediately following year.

| Inventory (1.4.2021) | 792 |  |
