# PAPER - 3: COST AND MANAGEMENT ACCOUNTING 

Question No. 1 is compulsory.

Attempt any four questions out of the remaining five questions.
In case, any candidate answers extra question(s)/ sub-question(s) over and above the required number, then only the requisite number of questions first answered in the answer book shall be valued and subsequent extra question(s) answered shall be ignored.

Working notes should form part of the answer.

## Question 1

Answer the following:
(a) TSK Limited manufactures a variety of products. The annual demand for one of its products- Product ' $X$ ' is estimated as $₹ 1,35,000$ units. Product ' $X$ ' is to be manufactured done in batches. Set up cost of each batch is ₹ 3,375 and inventory holding cost is ₹ 5 per unit. It is expected that demand of Product ' $X$ ' would be uniform throughout the year.

## Required:

(i) Calculate the Economic Batch (EBQ) for Product ' $X$ '.
(ii) Assuming that the company has a policy of manufacturing 7,500 units of Product ' $X$ ' per batch, calculate the additional cost incurred as compared to the cost incurred as per Economic Batch Quantity (EBQ) as computed in (i) above.
(5 Marks)
(b) SMC Company Limited is producing a particular design of toys under the following existing incentive system:

| Normal working hours in the week | 48 hours |
| :--- | :--- |
| Late shift hours in the week | 12 hours |
| Rate of payment | Normal working: ₹ 150 per hour |
|  | Late shift: ₹ 300 per hour |

Average output per operator for 60 hours per week (including late shift hours): 80 toys.
The company's management has now decided to implement a system of labour cost payment with either the Rowan Premium Plan or the Halsey Premium Plan in order to increase output, eliminate late shift overtime, and reduce the labour cost.
The following information is obtained:
The standard time allotted for ten toys is seven and half hours.
Time rate: ₹ 150 per hour (as usual).
Assuming that the operator works for 48 -hours in a week and produces 100 toys, you are required to calculate the weekly earnings for one operator under-
(i) The existing Time Rate,
(ii) Rowan Premium Plan and,
(iii) Halsey Premium Plan (50\%).
(5 Marks)
(c) The following information pertains to ZB Limited for the year:

| Profit volume ratio | $30 \%$ |
| :--- | :---: |
| Margin of Safety (as \% of total sales | $25 \%$ |
| Fixed cost | ₹ $12,60,000$ |

You are required to calculate:
(i) Break even sales value ( 7 ).
(ii) Total sales value (₹) at present,
(iii) Proposed sales value ( 7 ) if company wants to earn the present profit after reduction of $10 \%$ in fixed cost,
(iv) Sales in value (₹) to be made to earn a profit of $20 \%$ on sales assuming fixed cost remains unchanged,
(v) New Margin of Safety if the sales value at present as computed in (ii) decreased by $12.5 \%$.
(5 Marks)
(d) RST Toll Plaza Limited built an 80-kilometre-long highway between two cities and operates a toll plaza to collect tolls from passing vehicles using the highway. The company has estimated that 50,000 light weight, 12,000 medium weight and 10,000 heavy weight vehicles will be using the highway in one month in outward journey and the same number for return journey.

As per government notification, vehicles used for medical emergencies, Members of Parliament, and essential services are exempt from toll charges. It is estimated that 10\% of light weight vehicles will pass the highway for such use.
It is the policy of the company that if vehicles return within 24 hours of their outward journey, the toll fare will be reduced by 25 percent automatically. It is estimated that $30 \%$ of chargeable light weight vehicles return within the specified time frame.
The toll charges for medium weight vehicles is to be fixed as 2.5 times of the light weight vehicles and that of heavy weight vehicles as 2 times of the medium weight vehicles.

The toll and maintenance cost for a month is ₹ $59,09,090$, The company requires a profit of $10 \%$ over the total cost to cover interest and other costs.

## Required:

(i) Calculate the toll rate for each type of vehicle if concession facilities are not available on the return journey.
(ii) Calculate the toll rate that will be charged from light weight vehicles if a return journey concession facility is available, assuming that the revenue earned from light weight vehicles calculated in option (i) remains the same.
(5 Marks)

## Answer

(a) (i) Economic Batch Quantity $(E B Q)=\sqrt{\frac{2 D S}{C}}$
where,
D = Annual demand for the product
S = Set-up cost per batch
$C=$ Carrying cost per unit per annum.

$$
\sqrt{\frac{2 \mathrm{DS}}{\mathrm{C}}}=\sqrt{\frac{2 \times 1,35,000 \times 3,375}{5}}=13,500 \text { units. }
$$

(ii) Total Cost (of maintaining the inventories) when batch size (Q) are 13,500 and 7,500 units respectively
Total cost = Total set-up cost + Total carrying cost.

|  | When batch size is 13,500 <br> units | When batch size is 7,500 <br> units |
| :--- | :---: | :---: |
| Total set up cost | $=\frac{1,35,000}{13,500} \times ₹ 3,375$ |  |
| ₹ 33,750 |  |  |
| Or, |  |  |
|  | No. of setups $=10$ <br> $=10 \times ₹ 3,375=₹ 33,750$ | $=\frac{1,35,000}{7,500} \times ₹ 3,375$ |
| $=₹ 60,750$ |  |  |

$₹ 12,000$ is the excess cost borne by the company due to batch size not being economic batch quantity.
Alternative presentation

|  | EOQ 13,500 | Batch size 7500 | Extra cost | Saving |
| :--- | :---: | :---: | :--- | :--- |
| No of setup | 10 | 18 | $8 \times 3375=27,000$ |  |
| Carrying cost | $13,500-7500=6000 / 2$ @ 5 |  | 15,000 |  |

Net extra cost $=(27,000-15,000)=₹ 12,000$

## (b) Working Notes:

(1) Effective rate per hour:

Incentive for 60 hours $=(₹ 150 \times 48$ hours $+₹ 300 \times 12$ hours $)$
$=7,200+3,600=₹ 10,800$
$=₹ 10,800 \div 60$ hours $=₹ 180$ per hour
(2) Time taken/ Allowed to produce 100 toys:
$=(60$ hours $\div 80$ toys $) \times 100$ toys $=75$ hours
(3) Time saved $=$ Time Allowed - Time Taken
$=75$ hours -48 hours $=27$ hours
(i) Calculation of weekly earnings for one operator under the existing time rate:
$=(48$ hours $x ₹ 150)+(12$ hours $x ₹ 300)=₹ 10,800$

## Alternative solution

= Effective rate per hour (WN-1) $\times$ Time required for 100 toys (WN-2)
$=₹ 180 \times 75$ hours $=₹ 13,500$
(ii) Calculation of weekly earnings for one operator under Rowan Premium plan:
(Time taken $\times$ Rate per hour) + (Time Saved/ Time Allowed $\times$ Time taken $\times$ Rate per hour)
$=(48$ hours $\times ₹ 150)+[(27 \div 75) \times 48 \times ₹ 150]$
$=7,200+2,592=₹ 9,792$
(iii) Calculation of weekly earnings for one operator under Halsey Premium plan:
(Time taken $\times$ Rate per hour) $+(50 \%$ of Time Saved $\times$ Rate per hour)
$=(48$ hours $\times ₹ 150)+(50 \%$ of 27 hours $\times ₹ 150)$
= ₹ $7,200+₹ 2,025=₹ 9,225$
(c) (i) Calculation of Break-even sales in value:
= Fixed Cost $\div$ P/V Ratio
= ₹ $12,60,000 \div 30 \%=₹ 42,00,000$
(ii) Calculation of Total Sales value:

Sales value (S) = Break-even Sales + Margin of Safety
Or, $S=42,00,000+0.25 \mathrm{~S}$
Or, $0.75 \mathrm{~S}=42,00,000$
Or, $S=42,00,000 \div 0.75$
Or, Sales =₹ $56,00,000$
(iii) Calculation of proposed sales value to earn present profit:

Present profit $=$ Sales - Variable cost - Fixed Cost
= ₹ $56,00,000-70 \%$ of $56,00,000$ - ₹ $12,60,000$
= ₹ $56,00,000$ - ₹ $39,20,000$ - ₹ $12,60,000$
= ₹ $4,20,000$
Proposed Sales value (S) $=0.7 \mathrm{~S}+(90 \%$ of $₹ 12,60,000)+4,20,000$
$S=0.7 S+11,34,000+4,20,000$
$S=15,54,000 \div 0.3=₹ 51,80,000$
(iv) Calculation of sales value to earn $\mathbf{2 0 \%}$ on sales:

Sales Value $(S)=0.7 \mathrm{~S}+12,60,000+0.2 \mathrm{~S}$
$S=12,60,0000 \div 0.10=₹ 1,26,00,000$
(v) New Margin of Safety:
$=($ Sales - BES $) \div$ Sales
$=(87.5 \%$ of $56,00,000-42,00,000) \div(87.5 \%$ of $56,00,000)$
$=(49,00,000-42,00,000) \div 49,00,000$
$=7,00,000 \div 49,00,000=14.29 \%$
Or
= (Sales - BES)
$=(87.5 \%$ of $56,00,000-42,00,000)$
= ₹ $7,00,000$
(d) Working Notes:
(1) Calculation of equivalent numbers of Light weight vehicles (when no concession is provided on return journey)

| Type of vehicle | Monthly <br> traffic (A) | Return <br> traffic (B) | Ratio <br> (C) | Equivalent light <br> weight [(A + B) $\times \mathbf{C}]$ |
| :--- | ---: | ---: | ---: | ---: |
| Light weight | $45,000^{*}$ | 45,000 | 1 | 90,000 |
| Medium weight | 12,000 | 12,000 | 2.5 | 60,000 |
| Heavy weight | 10,000 | 10,000 | 5 | $\underline{1,00,000}$ |

*50,000 light vehicles less $10 \%$ exempted vehicles
(2) Calculation of equivalent numbers of Light weight vehicles (when concession is provided on return journey)

| Type of vehicle | Monthly traffic <br> (A) | Return traffic (B) | Ratio <br> (C) | Equivalent light weight $[(A+B) \times C]$ |
| :---: | :---: | :---: | :---: | :---: |
| Light weight | 45,000* | 41,625 | 1 | 86,625 |
|  |  | $\begin{array}{r} {[45,000-(45,000 \times} \\ 30 \% \times 25 \%)] \end{array}$ |  |  |
| Medium weight | 12,000 | 12,000 | 2.5 | 60,000 |
| Heavy weight | 10,000 | 10,000 | 5 | 1,00,000 |
|  |  |  |  | 2,46,625 |

(i) Calculation of toll rate for each type of vehicle:

Total cost to cover - Equivalent type of vehicles
(₹ $59,09,090+10 \%$ of ₹ $59,09,090$ ) $\div 2,50,000$ equivalent vehicles (Refer working note 1)
$=65,00,000 \div 2,50,000=₹ 26$
Toll rate for:
Light weight vehicle = ₹ 26
Medium weight vehicle $=₹ 26 \times 2.5=₹ 65$
Heavy weight vehicle $=₹ 26 \times 5=₹ 130$
(ii) Calculation of toll rate for each type of vehicle:

Revenue earned from Light weight vehicle in (i) above
$=90,000$ vehicles $\times ₹ 26=₹ 23,40,000$
New toll rate to maintain the same revenue from Light weight vehicle
$=₹ 23,40,000 \div 86,625$ (Refer working note-2) $=₹ 27.01$
Light weight vehicle $=₹ 27.01$
Rate to be charged from 13,500 light weight vehicles $=27.01 \times 0.75=20.26$

## Alternative presentation

(ii) Toll rate to be charged from light weight vehicles if concession applicable Revenue share in light vehicles $=90,000 \times 26=₹ 23,40,000$

Suppose rate is $x$, then outward journey $45,000 x$; return journey (45,000-30\% of 45,000$)+13,500(x-0.25)$
$45,000 x+31,500 x+13500(0.75 x)=₹ 23,40,000$
Toll rate to be charged from light weight vehicles: $86,625 x=₹ 23,40,000=$ ₹ 27.01

Rate to be charged from 76,500 light weight vehicles @ 27.01; revenue will be ₹ $20,66,494$

Rate to be charged from 13,500 light weight vehicles $=27.01 \times 0.75=20.26$ revenue will be ₹ $2,73,506$

## Question 2

(a) A Limited has furnished the following information for the months from $1^{\text {st }}$ January to 30th April, 2023:

|  | January | February | March | April |
| :--- | ---: | ---: | ---: | ---: |
| Number of Working days | 25 | 24 | 26 | 25 |
| Production (in units) per working day | 50 | 55 | 60 | 52 |
| Raw Material Purchases (\% by weights to <br> total of 4 months) | $21 \%$ | $26 \%$ | $30 \%$ | $23 \%$ |
| Purchase price of raw material (per kg) | $₹ 10$ | $₹ 12$ | $₹ 13$ | $₹ 11$ |

Quantity of raw material per unit of product: 4 kg .
Opening stock of raw material on 1stJanuary: 6,020 kg. (Cost ₹ 63, 210)

Closing stock of raw material on $30^{\text {th }}$ April: $5,100 \mathrm{~kg}$.
All the purchases of material are made at the start of each month.

## Required:

(i) Calculate the consumption of raw materials (in kgs) month-by- month and in total.
(ii) Calculate the month-wise quantity and value of raw materials purchased.
(iii) Prepare the priced stores ledger for each month using the FIFO method.
(10 Marks)
(b) B Limited has taken a contract for ₹ $70,00,000$ and furnishes the following information:

|  | 1st $^{\text {st }}$ Year | 2nd $^{\text {ne }}$ Year |
| :--- | ---: | ---: |
|  | (Amount in ₹) | (Amount in ₹ |
| Material | $12,50,000$ | $13,65,000$ |
| Wages | $12,50,000$ | $11,44,000$ |
| Direct Expenses | $4,20,000$ | $3,80,000$ |
| Indirect Expenses | $2,70,000$ | $2,60,000$ |
| Work Certified | $32,00,000$ | $70,00,000$ |
| Work Uncertified | $2,19,000$ | - |

## Other Information:

- Plant costing $₹ 3,40,000$ was bought at the commencement of the contract.
- Depreciation of ₹ 85,000 per annum is charged on the plant on Straight Line Method (SLM) basis.
- There is a provision for escalation clause in the contract for increase in material rate and wage rate in the second year only.
- Standard material for the first and second year was ₹ 12,000 units each year @ ₹ 90 per unit whereas the actual consumption was 12,500 @ ₹ 100 per unit in the first year and 13,000 units @ ₹ 105 per unit in the 2ndyear. Standard labour hours for first year were 10,000 hours and for the second year it was 9,000 hours. Standard wage rate was ₹ 120 per hour. The firm has paid for 10,000 hours @ ₹ 125 per hour in the first year and 8,800 hours @ ₹ 130 per hour in the second year.

## Required:

(i) Prepare Contract Account for both years without considering escalation clause.
(ii) Compute the total value of contract by considering the escalation clause.
(iii) Compute the total increase / (decrease) in the cost of material and wages for both the years.
(10 Marks)

## Answer

(a) (i) Calculation of consumption of Raw Material (in kgs) month by month and total

| Particulars | Jan | Feb | March | April | Total |
| :--- | ---: | ---: | ---: | ---: | ---: |
| No. of working days | 25 | 24 | 26 | 25 | - |
| Production (Per day) | 50 | 55 | 60 | 52 | - |
| Production | 1,250 | 1,320 | 1,560 | 1,300 | 5,430 |
| Raw Material Consumed (in kgs) | $\mathbf{5 , 0 0 0}$ | $\mathbf{5 , 2 8 0}$ | $\mathbf{6 , 2 4 0}$ | $\mathbf{5 , 2 0 0}$ | 21,720 |

Calculation of Raw Material Purchased

| Purchased | (Kg) |
| :--- | ---: |
| Closing stock on 30th April | 5,100 |
| Add: Raw Material consumed | 21,720 |
| Less: Opening stock on $1^{\text {st }}$ January | $(6,020)$ |
| Raw Material purchased | 20,800 |

(ii) Calculation of month wise quantity and value of raw material purchased

|  | \% | Purchased (Kg) | Price (₹) | Value (₹) |
| :--- | ---: | ---: | ---: | ---: |
| January | 21 | 4,368 | 10 | 43,680 |
| February | 26 | 5,408 | 12 | 64,896 |
| March | 30 | 6,240 | 13 | 81,120 |
| April | 23 | 4,784 | 11 | 52,624 |
| Total | 20,800 |  | $2,42,320$ |  |

(iii) Store Price Ledger by using FIFO method.

| Months | Particulars | Receipts |  |  | Issue |  |  | Balance |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Qty | Rate | Amount (₹) | Qty | Rate | Amount (₹) | Qty | Rate | Amount (₹) |
| Jan | Opening | 4,368 | 10 | 43,680 |  |  |  | 6,020 | 10.5 | 63,210 |
|  | Purchases |  |  |  |  |  |  | 6,020 | 10.5 | 63,210 |
|  | Consumption |  |  |  |  |  |  | 4,368 | 10 | 43,680 |
|  |  |  |  |  | 5,000 | 10.5 | 52,500 | 1,020 | 10.5 | 10,710 |
|  |  |  |  |  |  |  |  | 4,368 | 10 | 43,680 |
| Feb | Purchases | 5,408 | 12 | 64,896 |  |  |  | 1,020 | 10.5 | 10,710 |

| March | Consumption | 6,240 | 13 | 81,120 |  |  |  | $\begin{aligned} & 4,368 \\ & 5,408 \end{aligned}$ | 10 12 | $\begin{aligned} & 43,680 \\ & 64,896 \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | 1,020 | 10.5 | 10,710 | 108 | 10 | 1,080 |
|  |  |  |  |  | 4,260 | 10 | 42,600 | 5,408 | 12 | 64,896 |
|  | Purchase |  |  |  |  |  |  | 108 | 10 | 1,080 |
| April |  |  |  |  |  |  |  | 5,408 | 12 | 64,896 |
|  | Consumption | 4,784 | 11 | 52,624 |  |  |  | 6,240 | 13 | 81,120 |
|  |  |  |  |  | 108 | 10 | 1,080 |  |  |  |
|  |  |  |  |  | 5,408 | 12 | 64,896 |  |  |  |
|  | Purchases <br> Consumption |  |  |  | 724 | 13 | 9,412 | 5,516 | 13 | 71,708 |
|  |  |  |  |  |  |  |  | 5,516 | 13 | 71,708 |
|  |  |  |  |  |  |  |  | 4,784 | 11 | 52,624 |
|  |  |  |  |  | 5,200 | 13 | 67,600 | 316 | 13 | 4,108 |
|  |  |  |  |  |  |  |  | 4,784 | 11 | 52,624 |
|  |  |  |  |  |  |  |  |  |  | 56,732 |

(b) (i) Contract Account (For 1st Year)

| Particulars | (₹) | Particulars | (₹) |  |
| :--- | ---: | :--- | ---: | ---: |
| To Material | $12,50,000$ | By work in Progress |  |  |
| To Wages | $12,50,000$ | Work certified | $32,00,000$ |  |
| To Direct expense | $4,20,000$ | Work uncertified | $\underline{2,19,000}$ | $34,19,000$ |
| To Indirect expense | $2,70,000$ |  |  |  |
| To Depreciation | 85,000 |  |  |  |
| (₹3,40,000 - ₹2,55,000) |  |  |  |  |
| To Costing P\&L | $1,44,000$ |  | $\underline{34,19,000}$ |  |

## Contract Account (For 2nd Year)

| Particulars | (₹) | Particulars | (₹) |  |
| :--- | ---: | ---: | :--- | ---: |
| To Opening Work in Progress: |  | By Contractee A/C | $70,00,000$ |  |
| Work certified | $32,00,000$ |  |  |  |
| Work uncertified | $\underline{2,19,000}$ | $34,19,000$ |  |  |
| To Material | $13,65,000$ |  |  |  |
| To Wages | $11,44,000$ |  |  |  |
| To Direct expenses | $3,80,000$ |  |  |  |

| To Indirect expenses | 2,60,000 |  |
| :---: | :---: | :---: |
| ```To Depreciation (₹ 2,55,000 - ₹ 1,70,000) To Costing P&L (b/f)``` | 85,000 |  |
|  | 3,47,000 |  |
|  | 70,00,000 | 70,00,000 |

(ii) Computation of total value of contract after escalation clause

| Particulars | (₹) |
| :--- | ---: |
| Contract Price | $70,00,000$ |
| Increase in cost of material 12,000 (105-90) | $1,80,000$ |
| Increase in cost of labour 9,000 (130-120) | 90,000 |
|  | $\mathbf{7 2 , 7 0 , 0 0 0}$ |

(iii) Calculation of Increase/Decrease in cost of material and wages

| Year 1 | Standard Cost | Actual Cost | Increase/Decrease |
| :--- | ---: | ---: | ---: |
| Material | $10,80,000$ | $12,50,000$ | $1,70,000$ |
|  | $(12,000 \times 90)$ | $(12,500 \times 100)$ |  |
| Labour | $12,00,000$ | $12,50,000$ | 50,000 |
|  | $(10,000 \times 120)$ | $(10,000 \times 125)$ | $\overline{2,20,000}$ |
| Year 2 | Standard Cost | Actual Cost | Increase/Decrease |
| Material | $10,80,000$ | $13,65,000$ | $2,85,000$ |
|  | $(12,000 \times 90)$ | $(13,000 \times 105)$ |  |
| Labour | $10,80,000$ | $11,44,000$ | 64,000 |
|  | $(9,000 \times 120)$ | $(88,000 \times 130)$ | $\underline{3,49,000}$ |

## Question 3

(a) PQR Limited manufactures three products - Product $X$, Product $Y$ and Product Z. The output for the current year is 2,50,000 units of Product $X, 2,80,000$ units of Product $Y$ and 3,20,000 units of Product $Z$ respectively.
Selling price of Product $X$ is 1.25 times of Product $Z$ whereas Product $Y$ can be sold at double the price at which product $Z$ can be sold. Product $Z$ can be sold at a profit of $20 \%$ on its marginal cost.

Other information are as follows:

|  | Product $X$ | Product $Y$ | Product $Z$ |
| :--- | :---: | :---: | :---: |
| Direct Material Cost (Per unit) | $₹ 20$ | $₹ 20$ | $₹ 20$ |
| Direct Wages Cost (per unit) | $₹ 16$ | $₹ 24$ | $₹ 16$ |

Raw material used for manufacturing all the three products is the same. Direct Wages are paid @ ₹ 4 per labour hour,
Total overhead cost of the company is ₹ $52,80,000$ for the year, out of which ₹ 1 per labour hour is variable and the rest is fixed.

In the next year it is expected that sales of product $X$ and product $Z$ will increase by $12 \%$ and $15 \%$ respectively and sale of product $Y$ will decline by $5 \%$. The total overhead cost of the company for the next year is estimated at ₹ $55,08,000$. The variable cost of $₹ 1$ per labour hour remains unchanged.
It is anticipated that all other costs will remain same for the next year and there is opening and closing stock. Selling Price per unit of each product will remain unchanged in the next year.

## Required:

Prepare a budget showing the current position and the position for the next year clearly indicating the total product-wise contribution and profit for the company as a whole.
(10 Marks)
(b) The following information is available from SN Manufacturing Limited's for the month of April 2023.

|  | April 1 | April 30 |
| :--- | ---: | ---: |
| Opening and closing inventories data: |  |  |
| Stock of finished goods | 2,500 units | $?$ |
| Stock of raw materials | $₹ 42,500$ | $₹ 38,600$ |
| Work-in progress | $₹ 42,500$ | $₹ 42,800$ |
| Other data are: |  |  |
| Raw materials Purchased |  | $₹ 6,95,000$ |
| Carriage inward |  | $₹ 36,200$ |
| Direct wages paid |  | $₹ 32,800$ |
| Royalty paid for production |  | $₹ 35,800$ |
| Purchases of special designs, moulds and patterns |  | $₹ 1,53,600$ |
| (estimated life 12 Production cycles) |  | $₹ 70,600$ |
| Power, fuel and haulage (factory) |  |  |

| Research and development costs for improving the |  |  |
| :--- | ---: | ---: |
| production process (amortized) | $₹ 31,680$ |  |
| Primary packing cost (necessary to maintain quality) |  | $₹ 6920$ |
| Administrative Overhead |  | $₹ 46,765$ |
| Salary and wages for supervisor and foremen |  | $₹ 28,000$ |

## Other information:

- Opening stock of finished goods is to be valued at $₹ 8.05$ per unit.
- During the month of April, $1,52,000$ units were produced and $1,52,600$ units were sold. The closing stock of finished goods is to be valued at the relevant month's cost of production. The company follows the FIFO method.
- Selling and distribution expenses are to be charged at 20 paisa per unit.
- Assume that one production cycle is completed in one month.

## Required:

(i) Prepare a cost sheet for the month ended on April 30, 2023, showing the various elements of cost (raw material consumed, prime cost, factory cost, cost of production, cost of goods sold, and cost of sales).
(ii) Calculate the selling price per unit if profit is charged at 20 percent on sales.
(10 Marks)

## Answer

(a) (i) Budget showing current position of total product wise contribution and profitability

|  | Particulars | Product <br> $\mathbf{X}(₹)$ | Product $\mathbf{Y}$ <br> $(₹)$ | Product <br> $\mathbf{Z}$ (₹) | Total <br> (₹) |
| :--- | :--- | ---: | ---: | ---: | ---: |
| A | Direct material cost <br> (per unit) | 20 | 20 | 20 |  |
| B | Direct wages cost <br> (per unit) | 16 | 24 | 16 |  |
| C | Variable overhead <br> per unit <br> (Refer WN-1) | 4 | 6 | 4 |  |

| D | Total variable cost/ <br> Marginal cost per <br> unit [A+B+C] | 40 | 50 | 40 |  |
| :--- | :--- | ---: | ---: | ---: | ---: |
| E | Add: Profit [20\% of <br> D] | - | - | 8 |  |
| F | Selling price unit <br> [D+E] | - | - | 48 |  |
| G | Price weight | 1.25 | 2 | 1 |  |
| H | Selling price per <br> unit [Selling price of <br> Product Z $\times$ G] | 60 | 96 | 48 |  |
| I | Contribution per <br> unit [H-D] | 20 | 46 | 8 |  |
| J | Quantity to be sold | $2,50,000$ | $2,80,000$ | $3,20,000$ |  |
| K | Total Contribution <br> [J×l] | $50,00,000$ | $1,28,80,000$ | $25,60,000$ | $2,04,40,000$ |
| L | Fixed Overheads <br> [Refer WN-1] |  |  |  | $13,20,000$ |
| M | Profit |  |  |  | $1,91,20,000$ |

## Working Notes:

## 1. Segregation of Overheads into variable and fixed in current year

|  | Particulars | Product <br> $\mathbf{X}(₹)$ | Product <br> $\mathbf{Y}(₹)$ | Product <br> $\mathbf{Z}(₹)$ | Total <br> $(₹)$ |
| :--- | :--- | ---: | ---: | ---: | ---: |
| A | Total overhead cost | - | - | - | $52,80,000$ |
| B | Labour hour per unit <br> $[$ Direct wages Cost $\div$ <br> Re.1] | 4 | 6 | 4 |  |
| C | Quantity produced | $2,50,000$ | $2,80,000$ | $3,20,000$ |  |
| D | Total variable <br> overhead cost $[\mathrm{B} \times \mathrm{C}]$ | $10,00,000$ | $16,80,000$ | $12,80,000$ | $39,60,000$ |
| E | Fixed overhead cost <br> [A-D] |  |  |  | $13,20,000$ |

(ii) Budget showing next year's position of total product wise contribution and profitability
$\left.\begin{array}{|l|l|r|r|r|r|}\hline & \text { Particulars } & \begin{array}{r}\text { Product } \\ \mathbf{X} \text { (₹) }\end{array} & \begin{array}{r}\text { Product } \mathbf{Y} \\ (₹)\end{array} & \begin{array}{r}\text { Product } \\ \text { (₹) }\end{array} & \begin{array}{r}\text { Total } \\ \text { (₹) }\end{array} \\ \hline \text { A } & \begin{array}{l}\text { Selling price per } \\ \text { unit }\end{array} & 60 & 96 & 48 & \\ \hline \text { B } & \begin{array}{l}\text { Contribution per } \\ \text { unit }\end{array} & 20 & 46 & 8 & \\ \hline \text { C } & \begin{array}{l}\text { Quantity to be } \\ \text { sold }\end{array} & 2,80,000 \\ {[112 \% \text { of }} \\ 2,50,000]\end{array} \begin{array}{r}2,66,000 \\ {[95 \% \text { of }} \\ 2,80,000]\end{array} \begin{array}{rl}3,68,000 \\ {[115 \% \text { of }} \\ 3,20,000]\end{array}\right]$.

## Working Notes:

2. Segregation of Overheads into variable and fixed in next year

|  | Particulars | Product $\mathbf{X}$ <br> $(₹)$ | Product $\mathbf{Y}$ <br> $(₹)$ | Product Z <br> $(₹)$ | Total <br> $(₹)$ |
| :--- | :--- | ---: | ---: | ---: | ---: |
| A | Total overhead cost | - | - | - | $55,08,000$ |
| B | Labour hour per unit <br> [Direct wages Cost $\div$ <br> Re.1] | 4 | 6 | 4 |  |
| C | Quantity produced | $2,80,000$ | $2,66,000$ | $3,68,000$ |  |
| D | Total <br> overhead cost [BxC] | $11,20,000$ | $15,96,000$ | $14,72,000$ | $41,88,000$ |
| E | Fixed overhead cost <br> $[A-D]$ |  |  |  | $13,20,000$ |

(b)

Cost Sheet for the month of April 2023

| Particulars | Amount <br> $(₹)$ | Amount <br> $(₹)$ |
| :--- | ---: | ---: |
| Raw materials consumed: | $6,95,000$ |  |
| Raw materials purchased |  |  |

| Add: Carriage inward | 36,200 |  |
| :---: | :---: | :---: |
| Add: Value of opening stock of raw materials | 42,500 |  |
| Less: Value of closing stock of raw materials | $(38,600)$ | 7,35,100 |
| Direct wages paid |  | 3,22,800 |
| Royalty paid for production |  | 35,800 |
| Amortised cost of special designs, moulds and patterns $(₹ 153,600 \div 12)$ |  | 12,800 |
| Power, fuel and haulage (factory)* |  | 70,600 |
| Prime Cost* |  | 11,77,100 |
| Salary and wages of supervisor and foremen |  | 28,000 |
| Gross Works Cost |  | 12,05,100 |
| Add: Opening stock of WIP |  | 42,500 |
| Less: Closing stock of WIP |  | $(42,800)$ |
| Factory/ Works Cost |  | 12,04,800 |
| Research and development cost | 31,680 |  |
| Primary packing cost | 6,920 | 38,600 |
| Cost of Production |  | 12,43,400 |
| Add: Opening stock of finished goods (₹ $8.05 \times 2,500$ units) |  | 20,125 |
| Less: Value of closing stock [(2,500+152,000-1,52,600) $\times$ ( $12,43,400 \div 152000$ ) |  | $(15,542)$ |
| Cost of Goods Sold |  | 12,47,983 |
| Add: Administrative overheads |  | 46,765 |
| Add: Selling and distribution expenses ( $₹ 0.20 \times 1,52,600$ ) |  | 30,520 |
| Cost of Sales |  | 13,25,268 |
| Add: Profit (20\% on Sales or $25 \%$ on cost of sales) |  | 3,31,317 |
| Sales value |  | 16,56,585 |
| Selling price per unit (₹ $16,56,585 \div 1,52,600$ units) |  | 10.86 |

*May be taken as part of Factory / Works cost, however Total Factory Cost will remain the same. If taken as part of factory cost then prime cost will be ₹ $11,06,500$.

Alternative Solution (Based on work-in-progress figure of ₹ 45,500 as on $1^{\text {st }}$ April 2023 as per Hindi part of Question paper)

| Particulars | Amount | Amount (₹) |
| :---: | :---: | :---: |
| Raw materials consumed: |  |  |
| Raw materials purchased | 6,95,000 |  |
| Add: Carriage inward | 36,200 |  |
| Add: Value of opening stock of raw materials | 42,500 |  |
| Less: Value of closing stock of raw materials | $(38,600)$ | 7,35,100 |
| Direct wages paid |  | 3,22,800 |
| Royalty paid for production |  | 35,800 |
| Amortised cost of special designs, moulds and patterns (₹ $153,600 \div 12$ ) |  | 12,800 |
| Power, fuel and haulage (factory)* |  | 70,600 |
| Prime Cost |  | 11,77,100 |
| Salary and wages of supervisor and foremen |  | 28,000 |
| Gross Works Cost |  | 12,05,100 |
| Add: Opening stock of WIP |  | 45,500 |
| Less: Closing stock of WIP |  | $(42,800)$ |
| Factory/ Works Cost |  | 12,07,800 |
| Research and development cost | 31,680 |  |
| Primary packing cost | 6,920 | 38,600 |
| Cost of Production |  | 12,46,400 |
| Add: Opening stock of finished goods ( $₹ 8.05 \times 2,500$ units) |  | 20,125 |
| Less: Value of closing stock [(2,500+1,52,000 -1,52,600) × (12,46,400 $\div 1,52,000$ ) |  | $(15,580)$ |
| Cost of Goods Sold |  | 12,50,945 |
| Add: Administrative overheads |  | 46,765 |
| Add: Selling and distribution expenses ( $₹ 0.20 \times 1,52,600$ ) |  | 30,520 |
| Cost of Sales |  | 13,28,230 |
| Add: Profit ( $20 \%$ on Sales or $25 \%$ on cost of sales) |  | 3,32,058 |
| Sales value |  | 16,60,288 |
| Selling price per unit ( $₹ 16,60,288 \div 1,52,600$ units) |  | 10.88 |

*May be taken as part of Factory / Works cost, however Total Factory Cost will remain the same. If taken as part of factory cost then prime cost will be ₹ $11,06,500$.

## Question 4

(a) ABC Company produces a Product ' $X$ ' that passes through three processes: $R, S$ and $T$. Three types of raw materials, viz., $J, K$, and $L$ are used in the ratio of 40:40:20 in process R. The output of each process is transferred to next process. Process loss is $10 \%$ of total input in each process. At the stage of output in process $T$, a by-product 'Z' is emerging and the ratio of the main product ' $X$ ' to the by-product ' $Z$ ' is $80: 20$. The selling price of product ' X ' is ₹ 60 per kg.

The company produced $14,580 \mathrm{kgs}$ of product ' $X$ '
Material price : Material J @ ₹ 15 per kg; Material K @ ₹ 9 per kg.
Material L@ ₹ 7 per kg Process costs are as follows:

| Process | Variable cost per kg (₹) | Fixed cost of Input ( $)$ |
| :---: | :---: | :---: |
| $R$ | 5.00 | 42,000 |
| $S$ | 4.50 | 5,000 |
| $T$ | 3.40 | 4,800 |

The by-product 'Z' cannot be processed further and can be sold at ₹ 30 per kg at the splitoff stage. There is no realizable value of process losses at any stage.

## Required:

Present a statement showing the apportionment of joint costs on the basis of the sales value of product ' $X$ ' and by-product ' $Z$ ' at the split- off point and the profitability of product ' $X$ ' and by-product ' $Z$.
(10 Marks)
(b) Beta Limited produces 50,000 Units, 45,000 Units and 62,000 Units of product 'A', 'B' and 'C' respectively. At present the company follows absorption costing method and absorbs overhead on the basis of direct labour hours. Now, the company wants to adopt Activity Based Costing

The information provided by Beta Limited is follows:

|  | Product A | Product B | Product C |
| :--- | :---: | :---: | :---: |
| Floor Space Occupied | 5,000 Sq.Ft. | 4,500 Sq.Ft. | 6,200 Sq.Ft. |
| Direct Labour Hours | 7,500 Hours | 7,200 Hours | 7,800 Hours |
| Direct Machine Hours | 6,000 Hours | 4,500 Hours | 4,650 Hours |
| Power consumption | $32 \%$ | $28 \%$ | $40 \%$ |

Overhead for year are as follows:

| Rent \& Taxes | $8,63,500$ |
| :--- | :--- |
| Electricity Expenses | $10,66,475$ |
| Indirect labour | $13,16,250$ |
| Repair \& Maintenance | $\mathbf{1 , 2 8 , 7 7 5}$ |
|  | $33,75,000$ |

## Required:

(i) Calculate the overhead rate per labour hour under Absorption Costing.
(ii) Prepare a cost statement showing overhead cost per unit for each product - 'A', 'B' and ' C ' as per Activity based Costing.
(5 Marks)
(c) MNP Company Limited produces two products 'A' and 'B'. The relevant cost and sales data per unit of output is as follows.

| Particulars | Product $\boldsymbol{A}$ | Product $\boldsymbol{B}$ |
| :--- | ---: | ---: |
|  | (₹) | (₹) |
| Direct material | 55 | 60 |
| Direct labour | 35 | 45 |
| Variable factory overheads | 40 | 20 |
| Selling Price | 180 | 175 |

The availability of machine hours is limited to 55,000 hours for the month. The monthly demand for product ' $A$ ' and product ' $B$ ' is 5,000 units and 6,000 units, respectively. The fixed expenses of the company are $₹ 1,40,000$ per month. Variable factory overheads are ₹ 4 per machine hour. The company can produce both products according to the market demand.

## Required:

Calculate the product mix that generates maximum profit for the company in the situation and also calculate profit of the company.

## Answer

(a) Working Notes:

## 1. Calculation of Input of Raw Material

Let assume total raw material in Process R be $100 \%$
$\therefore$ Output of Process T will be equal to:
Input R 100\%

- 10\% Normal Loss ₹ 10

Input S ₹ $90 \%$

- $10 \%$ Normal loss ₹ 9

Input $T$ 81\%

- 10\% Normal loss ₹ 8.1

Output of T 72.9
Actual output of $X \quad 14,580$ units
Which is $80 \%$ of the total output
$\therefore \quad$ Output of Process T
$=\frac{14580}{80 \%}=18,225$
$\therefore \quad$ Input of Process $R=\frac{18225}{72.9 \%}=25,000 \mathrm{kgs}$
Alternative presentation for Calculation of Input in Process $R, S$ and $T$
Working notes:

| Process T (Kg.) |  |  |  |
| :--- | ---: | :--- | ---: |
| To Input (Transfer from process S) | 20,250 | By Normal loss | 2,025 |
|  |  | By Output Product X | 14,580 |
|  |  | By output of by-product Z | 3,645 |
|  | 20,250 |  | 20,250 |

| Process S (kg.) |  |  |  |
| :--- | ---: | :--- | :--- | ---: |
| To Input (Transfer from process S) | 22,500 | By Normal loss (10\%) | 2,250 |
|  |  | By Transfer to process T | 20,250 |
|  | 22,500 |  | 22,500 |

| Process R (kg.) |  |  |  |
| :--- | ---: | :--- | ---: |
| To Input | 25,000 | By Normal loss (10\%) | 2,500 |
|  |  | By Transfer to process S | 22,500 |
|  | 25,000 |  | 25,000 |

2. Calculation of Joint Cost

| Process | Inputs | Variable cost p | er kg | Variable cost | Fixed Cost | Total Cost |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | ₹ | ₹ | ₹ | $₹$ |
| R | 25,000 |  | 5 | 1,25,000 | 42,000 | 1,67,000 |
| S | 22,500 | 4.5 |  | 1,01,250 | 5,000 | 1,06,250 |
| T | 20,250 | 3.4 |  | 68,850 | 4,800 | 73,650 |
|  |  |  |  |  |  | 3,46,900 |
| Raw materia | I J | $10000 \times 15$ |  |  |  |  |
|  | K | $10000 \times 9$ | ₹ 90,000 |  |  |  |
|  | L | $5000 \times 7$ | ₹ 35,000 |  |  |  |
|  |  |  | 2,75,000 |  |  |  |
| Add: Processing cost (as above) |  |  |  | ₹ $3,46,900$ |  |  |
| Total Joint Cost |  |  | 6,21,900 |  |  |  |

(i) Statement showing apportionment of Joint Cost

| Particulars | Product X | By-Product Z | Total |
| :--- | ---: | ---: | :---: |
| Units | $\underline{14,580}$ | $\frac{3,645}{}$ |  |
| Selling price (₹) | 60 | 30 |  |
| Sales Value (₹) | $8,74,800$ | $1,09,350$ | $9,84,150$ |
| (₹ $6,21,900$ to apportioned in ratio of | $5,52,800$ | 69,100 | $6,21,900$ |
| sales value at split off point) |  |  |  |

(ii) Statement of Profitability

| Particulars | Product X | By-Product Z | Total |
| :--- | ---: | ---: | ---: |
| Sales Value | $8,74,800$ | $1,09,350$ | $9,84,150$ |
| Joint Cost | $(5,52,800)$ | $(69,100)$ | $(6,21,900)$ |
| (As apportioned above) | $\overline{3,22,000}$ | $\overline{40,250}$ | $3, \overline{, 62,250}$ |

(b) (i) Calculation of Overhead rate per hour
$\frac{\text { Total Overheads }}{\text { Total hours }}$

$$
\frac{33,75,000}{22,500}=₹ 150 \text { per hour }
$$

(ii) Statement showing overhead cost per unit as per Activity Based Costing

|  |  |  | Product |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Overheads | Cost Driver | Total | A | B | C |
|  |  | ₹ | ₹ | ₹ | ₹ |
| Rent \& Taxes | Floor space <br> $(50: 45: 62)$  | 8,63,500 | 2,75,000 | 2,47,500 | 3,41,000 |
| Electricity | Power Consumption (32:28:40) | 10,66,475 | 3,41,272 | 2,98,613 | 4,26,590 |
| Indirect labour | $\begin{array}{ll} \text { Labour } & \text { hours } \\ (75: 72: 78) \end{array}$ | 13,16,250 | 4,38,750 | 4,21,200 | 4,56,300 |
| Repair \& Maintenance | Machine $(600: 450: 465)$ | 1,28,775 | 51,000 | 38,250 | 39,525 |
| Total Cost |  | 33,75,000 | 11,06,022 | 10,05,563 | 12,63,415 |
| Units |  |  | 50,000 | 45,000 | 62,000 |
| Cost per Unit |  |  | 22.12 | 22.35 | 20.38 |

(c)

| Particulars | Product A <br> $\mathbf{₹}$ | Product B <br> $\mathbf{₹}$ |
| :--- | ---: | ---: |
| Selling Price | 180 | 175 |
| Variable cost: |  |  |
| Direct Material | 55 | 60 |
| Direct labour | 35 | 45 |
| Variable factory overheads | $\underline{40}$ | $\underline{20}$ |

| Machine hour (p.u.) | 50 | 50 |
| Contribution per hour | 10 | 5 |
| Rank | $\mathbf{5}$ | $\mathbf{1 0}$ |
|  | $\mathbf{I I}$ | $\mathbf{I}$ |

Calculation of Product Mix

| Hours available | 55,000 |
| :--- | ---: |
| Product $\mathbf{B}(6000 \times 5)$ | $\underline{30,000}$ |
| Balance Hours | 25,000 |
| Product A $(\mathbf{2 5 0 0} \times \mathbf{1 0})$ | $\underline{\mathbf{2 5 , 0 0 0}}$ |
| Balance Hours | 0 |

## Calculation of Profit

|  |  | ₹ |
| :--- | :--- | ---: |
| Contribution |  |  |
| A | 2500 units $\times 50$ |  |
| B | 6000 units $\times 50$ | $4,25,000$ |
| Less: | Fixed cost | $\underline{(1,40,000)}$ |
|  | Profit | $2,85,000$ |

## Question 5

(a) NC Limited uses a standard costing system for the manufacturing of its product ' $X$ '. The following information is available for the last week of the month:

- $25,000 \mathrm{~kg}$ of raw material were actually purchased for $₹ 3,12,500$. The expected output is 8 units of product ' X ' from each one kg of raw material. There is no opening and closing inventories. The material price variance and material cost variance, as per cost records, are ₹ 12,500 (F) and ₹ 1800 (A), respectively.
- The standard time to produce a batch of 10 units of product ' $X$ ' is 15 minutes. The standard wage rate per labour hour is 50 . The company employs 125 workers in two categories, skilled and semi-skilled, in a ratio of 60:40. The hourly wages actually paid were ₹ 50 per hour for skilled workers and ₹ 40 per hour for semiskilled workers. The weekly working hours are 40 hours per worker. Standard wage rate is the same for skilled and semi- skilled workers.
- The monthly fixed overheads are budgeted at $₹ 76,480$ Overheads are evenly distributed throughout the month and assume 4 weeks in a month. In the last week of the month, the actual fixed overhead expenses were ₹ 19,500 .

## Required:

(i) Calculate the standard price per kg and the standard quantity of raw material.
(ii) Calculate the material usage variance, labour cost variance, and labour efficiency variance.
(iii) Calculate the fixed overhead cost variance, the fixed overhead expenditure variance and the fixed overhead volume variance.
Note: Indicate the nature of variance i.e Favourable or Adverse.
(10 Marks)
(b) The following information has been obtained from financial accounting and cost accounting records.

|  | Financial <br> Accounting | Cost <br> Accounting |
| :--- | ---: | ---: |
|  | $₹$ | $₹$ |
| (i) Factory Overhead | 94,750 | 90,000 |
| (ii) Administrative Overhead | 60,000 | 57,000 |
| (iii) Selling Overhead | 55,000 | 61,000 |
| (iv) Opening Stock | 17,500 | 22,500 |
| (v) Closing Stock | 12,500 | 15,000 |

Required:
Indicate under-recovery and over-recovery and their effects on cost accounting profit.
[Note: You are not required to prepare reconciliation statement.]
(c) How does the high employee turnover increase the cost of production? Explain. (5 Marks)

## Answer

(a) (i) Calculation of Standard price per kg and the standard quantity of raw material: Standard Price
(a) Material Price Variance $=$ Standard Cost of Actual Quantity - Actual Cost
12,500 (F)
$=(S P \times A Q)-₹ 3,12,500$
12,500 (F)
$=(S P \times 25,000)-₹ 3,12,500$
SP
= ₹ 13

Standard Quantity
(b) Material Cost Variance $=$ Standard Cost - Actual Cost
1,800 (A)
$=S Q \times ₹ 13-₹ 3,12,500$

SQ $\quad=23,900 \mathrm{~kg}$.
(ii) Calculation of Material Usage Variance, Labour Cost Variance and Labour Efficiency Variance
(a) Material Usage Variance $=$ Standard Cost of Standard Quantity for Actual Output - Standard Cost of Actual Quantity

```
\(=\quad S Q \times S P-A Q \times S P\)
                                Or
\(=\quad S P \times(S Q-A Q)\)
\(=₹ 13 \times(23,900 \mathrm{~kg} .-25,000 \mathrm{~kg}\).
\(=\quad ₹ 14,300(A)\)
```

(b) Labour Cost Variance $=$ Standard Cost - Actual Cost
$=\quad(\mathrm{SH} \times \mathrm{SR})-(\mathrm{AH} \times \mathrm{AR})$
$=$ ₹ $2,39,000-₹ 2,30,000$
$=\quad ₹ 9,000(F)$
(c) Labour Efficiency Variance $=$ Standard Cost of Standard Time for Actual Production - Standard Cost of Actual Time

$$
\begin{array}{ll}
= & (S H \times S R)-(A H \times S R) \\
= & \text { Or } \\
= & (S H-A H) \times S R \\
= & ₹ 50 \times[4,780 \mathrm{hrs}-5,000 \mathrm{hrs} .] \\
=11,000(\mathrm{~A})
\end{array}
$$

(iii) Calculation of Fixed Overhead Cost Variance, Fixed Overhead Expenditure Variance and Fixed Overhead Volume Variance:
(a) Fixed overhead cost variance $=$ Standard Fixed Overheads - Actual Fixed Overheads
$=18,279-19,500$
$=$ ₹ $1,221(\mathrm{~A})$
(b) Fixed Overhead Expenditure $=$ Budgeted Fixed Overheads - Actual Fixed Overheads
Variance $=$ ₹ 19,120 - ₹ 19,500
$=₹ 380(A)$
(c) Fixed overhead volume variance $=$ (Budgeted output - Actual Output) X Budgeted rate per unit
$=(2,00,000-1,91,200) 0.0956$
$=$ ₹ $8,800 \times 0.0956$
$=₹ 841(A)$
Alternative presentation to part (iii) (a) and (b)
(i) Fixed Overhead Cost Variance:
= Overhead absorbed for actual production - Actual overhead incurred
$=\frac{₹ 19,120}{2,00,000} \times 1,91,200-19,500=₹ 1,221(A)$
(iii) Fixed Overhead Volume Variance:
= Absorbed overhead - Budgeted overhead
$=\frac{₹ 19,120}{2,00,000} \times 1,91,200-19,120=₹ 841(A)$

## Working Notes:

1. Standard time to produce 10 units of product $X$ is 15 minutes. Therefore we can manufacture 40 units in an hour.

Hours available in a week
125 Workers $\times 40$ Hours $=5,000$ hours
Therefore budgeted output $=5,000 \times 40$ units per hour $=2,00,000$ units

## Alternatively

Budgeted time per unit $=\frac{15 \text { units }}{10 \text { units }}=1.5$ minutes
So, Budgeted output $=\frac{5,000 \text { Hours } \times 60 \text { Minutes }}{1.5 \text { Minutes }}=2,00,000$ units
Actual output $=23,900 \times 8$ units $=1,91,200$ units
Standard hour for actual output $=1,91,200 \times \frac{0.25 \mathrm{Hrs}}{10 \text { units }}=4,780 \mathrm{Hrs}$
2.

| Labour |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Budget |  |  | Revised standard |  |  | Actual |  |  |  |
| Hours | Rate | ₹ | Hours | Rate | ₹ |  | Hours | Rate | ₹ |
| 5,000 | 50 | 2,50,000 | 4,780 | 50 | 2,39,000 | Skilled | 3000 | 50 | 1,50,000 |
|  |  |  |  |  |  | SemiSkilled | 2000 | 40 | 80,000 |
|  |  |  |  |  |  |  | 5000 |  | 2,30,000 |

3. 

|  | Budget | Actual |
| :---: | :---: | :---: |
| Units | $2,00,000$ | $1,91,200$ |
| Fixed Overheads | 19,120 | 19,500 |

4. Standard Fixed overheads:
$\frac{19,120}{2,00,000} \times 1,91,200=₹ 18,279$
Budgeted rate per unit:

$$
\frac{19,120}{2,00,000}=₹ 0.0956
$$

(b)

|  | Financial Accounting | Cost Accounting | Difference <br> $₹$ | Under/Overrecovery | Effect on Cost <br> Accounting Profit | Net Effect* on Cost Accounting Profit |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | ₹ | ₹ |  |  |  |  |
| (i) Factory Overhead | 94,750 | 90,000 | 4,750 | Under-recovery | Increased | To be reduced/ deducted |
| (ii) Administrative Overhead | 60,000 | 57,000 | 3,000 | Under-recovery | Increased | To be reduced/ deducted |
| (iii) Selling Overhead | 55,000 | 61,500 | -6,500 | Over-recovery | Decreased | To be added |
| (iv) Opening Stock | 17,500 | 22,500 | -5,000 | Over valuation | Decreased | To be added |
| (v) Closing Stock | 12,500 | 15,000 | -2,500 | Over valuation | Increased | To be reduced/ deducted |

*Taking Cost Accounting Profit as base
(Under recovery and over recovery with effect are answered by the candidate, or if under recovery and over recovery with treatment (net effect) are answered, due credit shall be given in both cases)
(c) High Employee Turnover increases the cost of production

Replacement costs are the costs which arise due to employee turnover. If employees leave soon after they acquire the necessary training and experience of good work, additional costs will have to be incurred on new workers, i.e., cost of recruitment, training and induction, abnormal breakage and scrap and extra wages and overheads due to the inefficiency of new workers.

It is obvious that a company will incur very high replacement costs if the rate of employee turnover is high. Similarly, only adequate preventive costs can keep Employee turnover at a low level. Each company must, therefore, work out the optimum level of Employee turnover keeping in view its personnel policies and the behaviour of replacement cost and preventive costs at various levels of Employee turnover rates.

## Question 6

Answer any four of the following:
(a) Define cost objects and give examples of any four cost objects,
(b) Explain what is meant by Practical capacity and Normal capacity. How is normal capacity determined?
(c) What is meant by Activity Based Management (ABM) and discuss how Activity Based Management can be used in the business?
(d) Suggest any one basis of re-apportionment of service department overheads over production departments in the following instances:

| Cost of Service Department | Basis |
| :--- | :--- |
| (i) Maintenance and Repair Shop |  |
| (ii) Hospital and Dispensary |  |
| (iii) Fire Protection |  |
| (iv) Stores Department |  |
| (v) Transport Department |  |
| (vi) Computer Section |  |
| (vii) Power House (Electric Power Cost) |  |
| (viii) Inspection |  |
| (ix) Tool Room |  |
| (x) Time-keeping |  |

(e) How will you treat normal loss, abnormal loss and abnormal gain in process costing? Explain
( $4 \times 5=20$ Marks)

## Answer

(a) Definition of cost objects

Cost object is anything for which a separate measurement of cost is required. Cost object may be a product, a service, a project, a customer, a brand category, an activity, a department or a programme etc.

## Examples of cost objects

| Product | Smart phone, Tablet computer, SUV Car, Book etc. <br> Service |
| :--- | :--- |
| An airline flight from Delhi to Mumbai, Concurrent audit assignment, <br> Utility bill payment facility etc. |  |
| Project | Metro Rail project, Road projects etc. |
| Activity |  |
| Process | Quality inspection of materials, Placing of orders etc. <br> Refinement of crudes in oil refineries, melting of billets or ingots in rolling <br> mills etc. |
| Department | Production department, Finance \& Accounts, Safety etc. |

(b) Meaning of Practical capacity and Normal capacity

Practical capacity is defined as actually utilised capacity of a plant. It is also known as operating capacity. This capacity takes into account loss of time due to repairs, maintenance, minor breakdown, idle time, set up time, normal delays, Sundays and holidays, stock taking etc. Generally, practical capacity is taken between 80 to $90 \%$ of the rated capacity. It is also used as a base for determining overhead rates. Practical capacity is also called net capacity or available capacity.
Normal capacity is the volume of production or services achieved or achievable on an average over a period under normal circumstances taking into account the reduction in capacity resulting from planned maintenance.
Normal capacity is determined as under:

| Installed capacity |  | xxx |  |
| :--- | :--- | :--- | :--- |
| Adjustments for: |  |  |  |
| (i) | Time lost due to scheduled preventive or planned maintenance | xxx |  |
| (ii) | Number of shifts or machine hours or man hours |  |  |
| (iii) | Holidays, normal shut down days, normal idle time | xxx |  |
| (iv) | Normal time lost in batch change over | $\underline{x x x}$ | $\underline{x x x}$ |
| Normal Capacity |  | $\underline{x x x}$ |  |

## (c) Meaning of Activity Based Management (ABM)

The term Activity based management (ABM) is used to describe the cost management application of ABC. The use of ABC as a costing tool to manage costs at activity level is known as Activity Based Cost Management (ABM). ABM is a discipline that focuses on the efficient and effective management of activities as the route to continuously improving the value received by customers. ABM utilizes cost information gathered through ABC.
Activity based management can be used in the following ways:
(i) Cost Reduction: ABM helps the organisation to identify costs against activities and to find opportunities to streamline or reduce the costs or eliminate the entire activity, especially if there is no value added.
(ii) Business Process Re-engineering: Business process re-engineering involves examining business processes and making substantial changes to how organisation currently operates. ABM is a powerful tool for measuring business performance, determining the cost of business output and is used as a means of identifying opportunities to improve process efficiency and effectiveness.
(iii) Benchmarking: Benchmarking is a process of comparing of ABC-derived activity costs of one segment of company with those of other segments. It requires uniformity in the definition of activities and measurement of their costs.
(iv) Performance Measurement: Many organisations are now focusing on activity performance as a means of facing competitors and managing costs by monitoring the efficiency and effectiveness of activities.
(d) Basis of re-apportionment of service department overheads over production departments

| Cost of the Service Departments: | Basis |
| :--- | :--- |
| (i) Maintenance and Repair shop | Direct labour hours, Machine hours, Direct labour <br> wages, Asset value x Hours worked |
| (ii) Hospital and Dispensary | No. of employees, No. of direct workers etc. |
| (iii) Fire Protection | Capital values |
| (iv) Stores Department | No. of requisitions, Weight or value of Materials <br> issued. |
| (v) Transport Department | Crane hours, Truck hours, Truck mileage, Truck <br> tonnage, Truck ton- hours, Tonnage handled. <br> No. of packages of Standard size |
| (vi) Computer Section | Computer hours, Specific allocation to <br> departments |

| (vii)Power House (Electric Power <br> Cost) | Horse power, Kwh, Horse power $\times$ Machine <br> hours, Kwh $\times$ Machine hours |
| :--- | :--- |
| (viii) Inspection | Inspection hours, number of inspections. |
| (ix) Tool room | Direct labour hours, Machine hours, Direct labour <br> wages, Asset value x Hours worked |
| (x) Time-keeping | No. of card punched, No. of employees |

(e) Treatment of normal loss, abnormal loss and abnormal gain in process costing

Treatment of Normal loss in Cost Accounts: The cost of normal process loss in practice is absorbed by good units produced under the process. The amount realised by the sale of normal process loss units should be credited to the process account.

Treatment of Abnormal loss in Cost Accounts: The cost of an abnormal process loss unit is equal to the cost of a good unit. The total cost of abnormal process loss is credited to the process account from which it arises. Cost of abnormal process loss is not treated as a part of the cost of the product. In fact, the total cost of abnormal process loss is debited to costing profit and loss account.
Treatment of Abnormal Gain in Cost Accounts: The process account under which abnormal gain arises is debited with the abnormal gain and credited to abnormal gain account which will be closed by transferring to the Costing Profit and Loss account. The cost of abnormal gain is computed on the basis of normal production.
